

GEORGIA DATABASE PROBLEMS

JOHNSON – County added split after ballots were printed, will use original database for counting absentee ballots and new database for election day.

IRWIN – Changes in database, cause cards to renumber. Printer used first database to print ballots instead of revised database. New database sent.

LAURENS – Ballots needed to be reprinted due to incorrect name on a NP race. County signed off with incorrect name.

MUSCOGEE – One precinct was not in original database, customer signed off and didn't notice, revised database sent to press, no new ballot styles added, cards just renumbered. Have not received ballots yet to test. Second database sent on June 11, using new database now for TS absentee and election day.

WALTON – County added split, revised database sent for printing. Ballots not yet received to test. New database added.

WARE – County does not know her district lines - precincts with districts. Programmed according to her sheets sent in, signed off and database delivered. TS absentee in process, found out that she was missing styles. She sent in a second sheet, which was different than first. Sent Gail from Chatham county down there to check lines, Gail sent in precinct/district info and Michael from SOS sent in data sheet from voter registration, which were pretty close between Gail and Michael. Second database created, which created 7 more ballot styles. Michael had me redo again saying there were no registered voters in the precinct that created 3 of the ballot styles, third database. County clerk would not sign off as she says there still are ballot styles missing, she wants four more splits added. Gail is driving back down now before I change again. Will add missing ballot styles to new database (4th) to show all styles Ware wants.

MORE CHANGES ADDED.

WALTON – Changed three precincts with 8 splits that had incorrect house districts, error on counties part. Third database created to be used for election day and 5 new ballot styles to be counted on the new AV card for absentee. Original first database will count paper ballots for absentee except for new styles. Will not longer use 2nd database sent, L & A and all new cards were done on third database today 7/15/04.

COLQUITT - Added BOE to Hamilton precinct, ballot style already in database, will use old database to count paper ballots, new database for election day. County error.

CANDLER – Name change from Jr. to Sr. Audio fixed, no new paper ballots, TS fixed for election day. L & A and new cards to be tested.
